Personal Statement

I am a Computer Science student at RPI concentrating on the intersection of Machine Learning and Large-scale software engineering. My goal is to leverage ML and software development techniques to push the bounds of what we can solve. Due to their high positive impact, I am particularly interested in using those techniques to solve problems within chemistry and biology.

Education

Rensselaer Polytechnic Institute

Bachelor of Science in Computer Science

Troy, NY

May 2025

- **GPA:** 3.18 **GPA in major:** 3.55
- **Relevant Course Work:** Data Structures, Introduction to algorithms, Operating Systems, Database Systems, Machine Learning from Data, Robotics, Software Design and Documentation, Data Analytics
- **Honors:** Rensselaer Leadership Award, Dean's Honor List

Skills

Programming C, C++, Java, Python, MATLAB, JavaScript, React, HTML5, JavaScript, NodeJS

Technologies Git, GitHub, GitHub Actions, Linux/terminal, bash scripting, Docker, Webots, PX4

Work Experience

Merck and Co.

ML Ops Intern

Cambridge, MA

June 2024 - August 2024

- Built a standardized MLOps template repository with built in CI/CD deployed to aide several computational biology and chemistry teams.
- Created comprehensive documentation on how to orchestrate and maintain CI/CD within the previously mention template.
- As a direct result, Data scientists were able to spend less effort maintaining existing models and were able to focus on creating new models for new problems.

Rensselaer Polytechnic Institute

Introduction to Computer Science Undergraduate Mentor

Troy, NY

Sept 2022 - Current

- Hold office hours twice a week where students can get help with their homework.
- Hold exam review sessions where students can get extra practice and can go over their answers for back exams.
- Make grading recommendations for exams.
- Teaching students how to reason about code, deal with frustration, and solve difficult problems in what is often their first exposure to programming.

CRC-5

Rensselaer Polytechnic Undergraduate Research

Troy, NY

November 2023 - April 2024

- Write custom firmware for a drone with quadrotor and forward flight capabilities.
- Due to a hardware issue, most of my firmware could not be experimentally validated.
- To address this, I used a simulation software called webots to better understand how the firmware would work in the real world.

Projects

Thunder Mountain Curry(Technical Lead)

Rensselaer Community for Open Source

Troy, NY

May 2023 - current

- Recruited 8 people based on their skills to create the app
- Provided students who had minimal development experience with resources they needed to learn and grow while contributing meaningfully to the team.
- Solved version control problems with losing functionality
- Implemented CI to validate incoming pull requests against our style and test modules.

Open Energy Dashboard(OED)

Rensselaer Community for Open Source

Troy, NY

May 2023 - current

- Acquired data and created a model to predict energy usage based on weather data.
- Reviewed Pull Requests from other contributors in order to verify code style and readability, and correctness.
- Wrote tests to validate API data using the chai mocha testing library.
